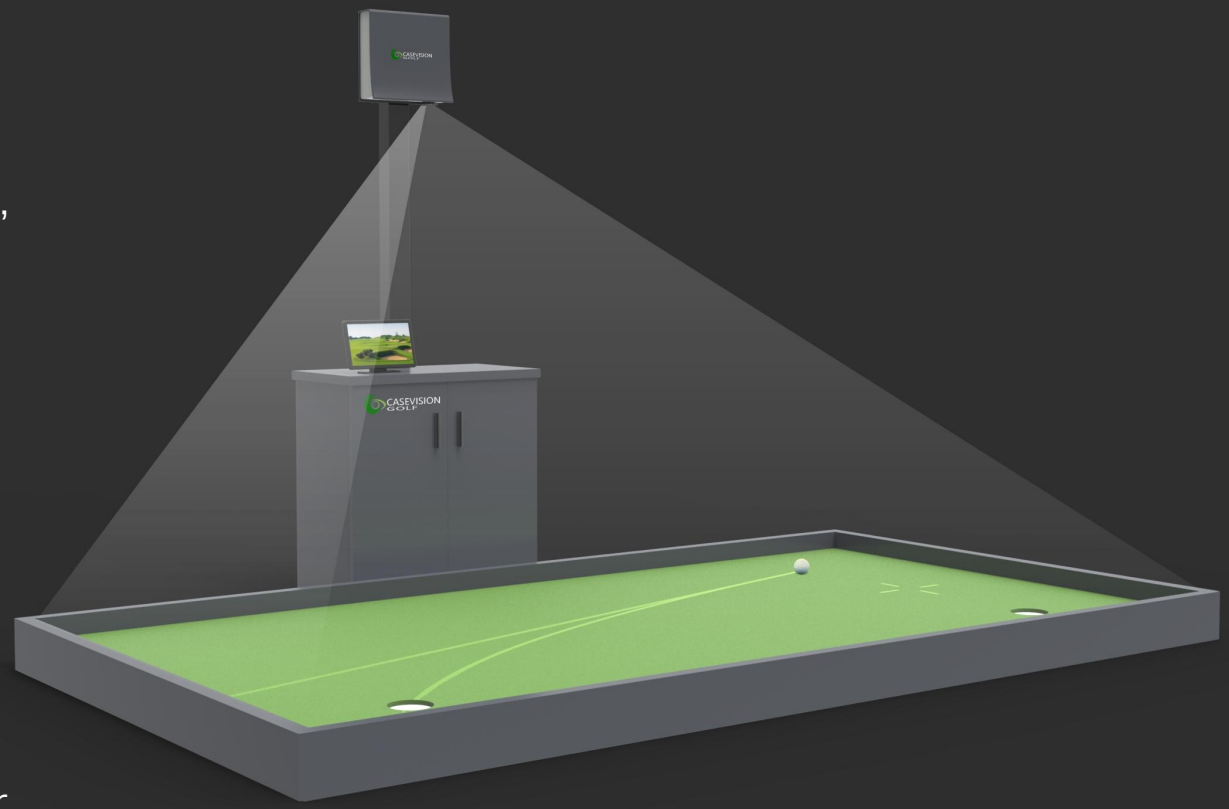
iPUTT
Ideal and reality are perfectly presented,
and training and entertainment are
perfectly combined
CASEVISION
GOLF
Product Introduction

iPUTT is an AR golf putting training and entertainment system that innovatively transforms the golf green into an interactive teaching, training, and entertainment environment. Based on the ball's position, green topography, and speed, iPUTT provides putting tips: putting direction, calculated putting path, and real-time tracking and display of the ball's trajectory for instant feedback. The repeatability of training and the visualization of correct putting trajectories effectively improve your green reading and putt skills. iPUTT also offers a variety of fun interactive games to enhance your putting skills, allowing you to improve your putting technique while having fun.

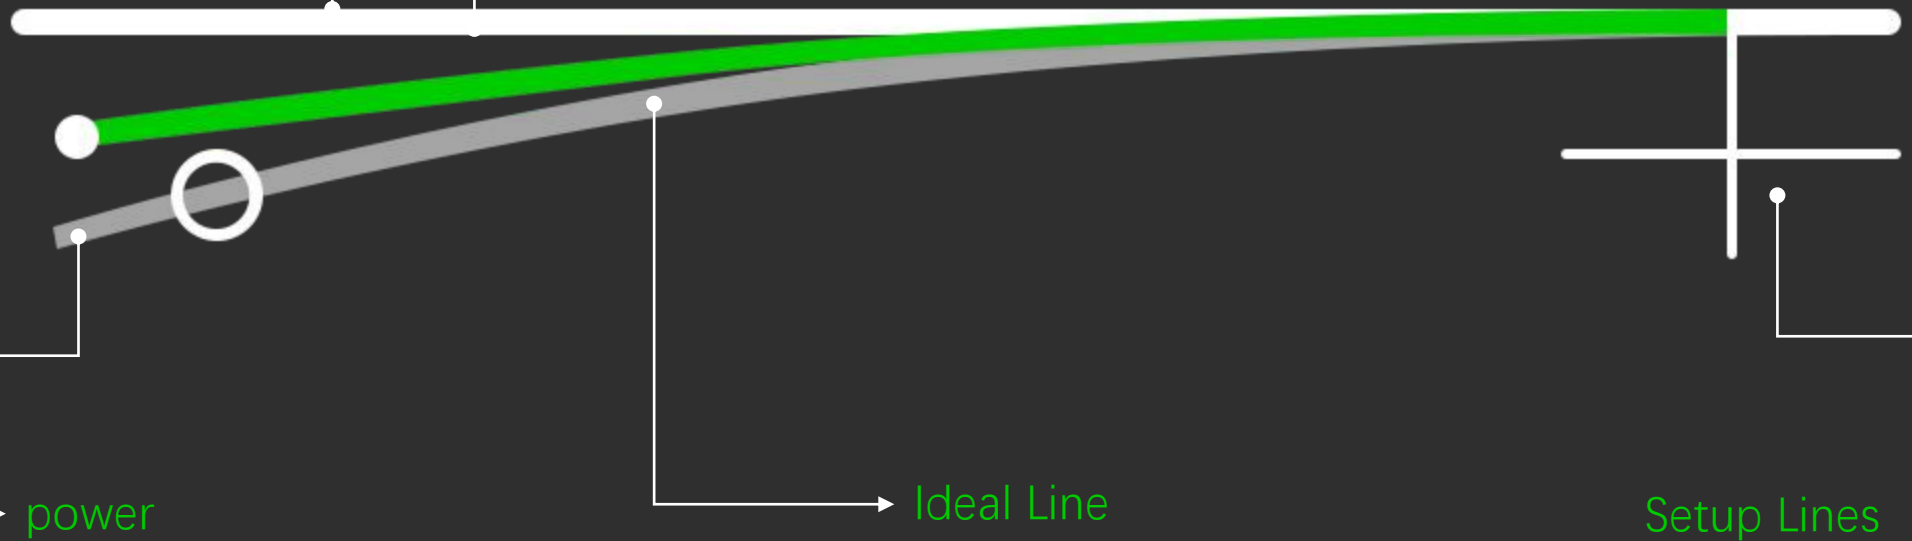


Aiming Line

Based on the hole, ball position, green topography, and desired putting power, this line provides your aiming direction.

Tracking Line

Tracks the actual trajectory of the ball and displays it on the green.



power

Adjust the power from zero speed to 1 foot or 2 feet past the hole.

Ideal Line

Based on the hole, ball position, terrain, and set putting power, this function generates an ideal approach trajectory to the hole.

Setup Lines

Stance lines help you check your stance and posture.

Contour lines

Contour lines display the slope of a green like a topographic map. These lines connect points of equal height, allowing you to quickly identify the slope of the green. Contour lines help golfers better read the green, determine its slope, understand the effect of gravity on the ball's roll, and better identify breakpoints in their putting.

Training Mode

To meet your training and teaching needs, we've provided three training modes in Training Mode:

- AnyPutt
- RandomPutt
- PresetPutt

You can pre-set up to 45 shot paths in the "Putting Plan" mode. Based on the green terrain, you can set up uphill putts, downhill putts, and straight putts to create a variety of putting paths for both Random Putt and Preset Putt.

Game Modes

To break up boring practice, you can play a variety of fun games:

- Hole-in-Cup Game
- Nine-Square Game
- Shooting Game
- Random Target
- **Maze Game**
- **Challenge Space**

These games are not only fun but also very helpful in improving your putting skills. Some games may focus on your distance control, while others may focus on your directional control, allowing you to improve your putting skills through fun games.

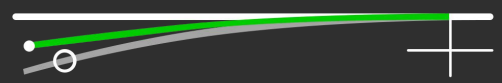
Why can iPutt help you improve your putting skills?

Practice repeatedly

Teach you
how to do it?

Tell you what to do: Visually show you the direction of your putt (aiming line) and the ideal trajectory of the ball into the hole (ideal line) on the green)

You try hard to



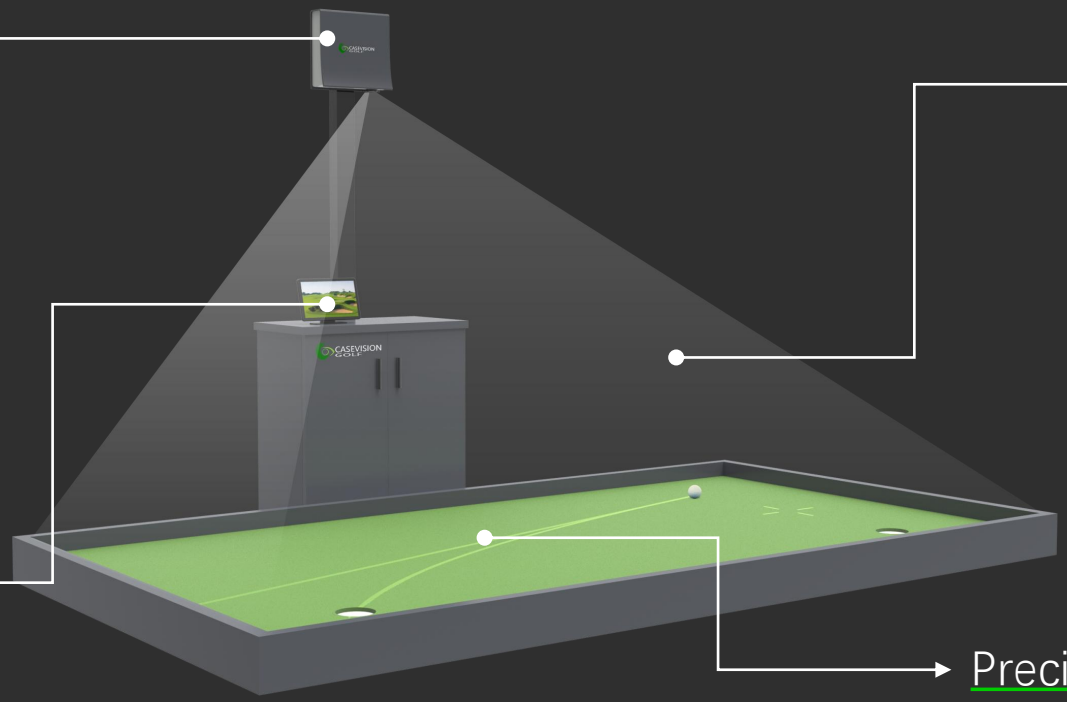
What you need to do is try to follow the direction of the push indicated by the system and use the appropriate force to push.

Feedback helps
you improve

Feedback helps you improve your putting technique: the system tracks and displays the ball's trajectory on the green, giving you feedback on the actual results of your putts.

Projection

One or more installed projectors transform the putting green into an interactive learning environment. Visual feedback such as putting trajectory and ideal rolling trajectory is displayed on the green in real time.



3D Data

iiPutt's accuracy depends on the precision of your green's 3D model. Regardless of your green's topography, we can scan it and create a 3D model using modern laser scanning technology.

iPad Interaction

iPutt's interactive interface allows you to complete all interactive operations simply by installing the app on your iPad. No other computer terminals are required, making it easy to use.

Precise Calculation

Using our powerful core processor and precise green model, we can calculate the exact putt direction, ideal roll trajectory, and more for any position on the green.
